

Cambi signs contract for THP at Rosedale wastewater treatment plant in Auckland, New Zealand

Asker, Norway, 29 April 2026

Cambi has entered into a contract with Watercare Services Limited to supply two thermal hydrolysis process (THP) systems for the Rosedale wastewater treatment plant in Auckland, New Zealand.

The contract begins with an engineering phase. Manufacturing is expected to commence following a later notice to proceed and no earlier than 12 months from now.

Thermal hydrolysis will increase digestion capacity at Rosedale without the need for new digesters, support higher biogas production, improve dewatering, reduce biosolids volumes for disposal, and reduce carbon footprint and waste while lowering asset life-cycle costs.

Per Lillebø, CEO of Cambi, remarked:

“Rosedale is a strategically important project in a growing market and marks an important contract for Cambi. Watercare, New Zealand’s largest water utility, is investing in long-term treatment capacity, improved performance, and reduced emissions at a major wastewater treatment plant in Auckland. Cambi appreciates the opportunity to support that programme with thermal hydrolysis technology tailored to the site’s requirements.”

Watercare provides water and wastewater services to 1.7 million people in Auckland and is upgrading the Rosedale plant as part of a broader investment programme to support growth, improve treatment performance, and reduce emissions. Rosedale is Watercare’s second-largest wastewater treatment plant, and the wider upgrade programme will increase wastewater flows reaching the site.

The value of the engineering phase is equivalent to a small contract for Cambi, while the total project value is equivalent to a large contract.

The project’s current timeline has equipment delivery scheduled for 2028, with operations starting in 2030.

About Cambi

Cambi is a global supplier of biogas technology and solutions for wastewater treatment plants and anaerobic digestion facilities. Since 1992, Cambi has maintained market leadership through continuous innovation and a robust portfolio of proven and patented technologies. With strong project delivery and customer support capabilities, the company has delivered more than 100 well-performing installations in 28 countries on six continents.

Cambi's thermal hydrolysis process increases renewable energy output, improves dewatering, reduces operating costs, and minimises greenhouse gas emissions. The technology is suitable for both new and existing anaerobic digestion sites and compatible with all biosolids outlets, including land application and downstream thermal processes such as drying, pyrolysis and incineration. Thermal hydrolysis is robust to regulatory changes and supports compliance with legal requirements for biosolids and waste treatment.

Cambi is listed on Euronext Growth Oslo, a multilateral trading facility in Euronext, Europe's largest stock exchange platform. Find out more at cambi.com.
