

ININ Group: Power wins 26 MNOK contract

Laje AS, a Company within ININ Group subsidiary ININ Power, has won a contract with Nedre Romerike water and wastewater company, at a contact value of 26 MNOK.

The contract is a high-voltage electrical contract for Nedre Romerike water and wastewater company. The work includes a 5kV installation at the existing building that will supply the facility for pump operation. The total contract value is about 26 MNOK.

The project includes, among other things:

- Design, delivery, assembly, testing and commissioning of a 5 kV high-voltage system
- Establishment of a complete system for operating four pumps with frequency converters
- Delivery of transformer, switchgear, cables and instrumentation
- Cable installation in boreholes with grounding, EMC measures and mechanical relief
- Piping, fireproofing, plinths/platforms and technical installation

Implementation

Implementation is based on close planning and coordination with the client, UE and other contractors to ensure the correct sequence and interface management. The project is carried out with detailed design, followed by assembly and installation according to technical requirements and solutions. Finally, testing, commissioning and trial operation are carried out before handover of a fully documented system.

Implementation will continue until everything is handed over in July 2028.

Scope of work and objectives

The project is an important contribution to strengthening the power supply to the new pumps. At the same time, great emphasis is placed on HMS and quality in all phases as well as efficient use of resources and sustainable solutions

Scope and significance

The contract represents a significant development and modernization of the water pumps for NRVA, and for Laje this is a key project that strengthens the company's position and expertise within advanced electrical engineering systems.
