GOODTECH SHALL UPGRADE SKISTUA TRANSFORMER STATION IN NARVIK

Goodtech has signed a contract with Noranett for the modernization of Skistua transformer station in Narvik. The project will strengthen critical power infrastructure in a region preparing for increased activity and international attention ahead of the FIS Alpine World Ski Championships in 2029.

Goodtech's contract scope has an estimated value of approximately NOK 17 million and includes engineering, project management, procurement, installation, testing, commissioning and documentation of a complete indoor medium-voltage switchgear and control system. Handover is scheduled for Q4 2027.

The contract will be added to Goodtech's order backlog and supports the company's targeted growth within critical infrastructure, electrification and digital control systems. The delivery will contribute to a more robust and future-ready power system in the Narvik region.

"Reliable power infrastructure will be an important part of enabling growth, activity and safe operations in the Narvik region. We are proud to be selected for this project, and the contract plays directly to our strengths within power systems, automation and digital control, and supports our ambition to grow in an attractive market segments," says Margrethe Hauge, CEO of Goodtech ASA.

"Upgrading Skistua is an important investment in the power supply for Narvik. We need a partner with solid expertise in medium-voltage systems and digital control, and a proven ability to deliver complex projects safely and on schedule. Goodtech met those requirements, and we look forward to a close and constructive collaboration throughout the project," says Tony Molund, managing director at Noranett.
