

Biomethane Station Data June 2026

9 July 2026 - ReFuels N.V., a leading European supplier of renewable biomethane (Bio-CNG) for the decarbonisation of heavy goods vehicles (HGVs), today published Bio-CNG station data for June 2026.

- CNG Fuels dispensed 5,695 tonnes of Bio-CNG from 16 public access refuelling stations, up 9% from 5,246 tonnes in June 2025
- Average daily dispensed volume was 190 tonnes per day, compared to 175 tonnes per day in the year-earlier period
- A daily average of 2,263 vehicles refuelled across the station network, an increase of 11% year-on-year
- The rolling three-month average number of vehicles increased to a record 2,252 per day, up 11% year-on-year

"As expected, we saw a pick-up in activity in June, with growth in dispensed volume, number of vehicles and RTFC pricing, reflecting strong interest for Bio-CNG among fleet operators. Locally produced biomethane is increasingly recognised as a proven solution enabling lower fuel costs, reduced emissions and greater energy resilience," said Philip Fjeld, CEO and co-founder of ReFuels.

Prices for Renewable Transport Fuel Certificates (RTFCs) averaged 21.7 pence in June and traded as high as 24.5 cent during the month, back in line with the historical market average. The average RTFC price was 25.5 pence in June 2025. ReFuels has, as previously communicated, secured the expected biomethane requirement for the 2026 obligation year and sold the corresponding RTFCs forward for later delivery at around 25-26 pence. This provides margin and profitability visibility. RTFCs are awarded at a rate of 3.8 certificates per kilogram of Bio-CNG dispensed and sold to fuel suppliers with a blending obligation under the UK's Renewable Transport Fuel Obligation (RTFO) scheme.

CNG Fuels supplies biomethane through a growing network of refuelling stations, currently operating 16 public access Bio-CNG stations strategically located on major UK trucking routes. Two additional stations in Magor, South Wales, and Swindon, South-West England, are under construction to further expand network capacity.

ReFuels provides monthly operational updates, normally released within ten working days after the end of each month.

About ReFuels

ReFuels is decarbonising Europe's truck fleet through its 40% ownership of CNG Fuels - a fully integrated clean fuel infrastructure platform combining sourcing of renewable biomethane (Bio-CNG), Renewable Transport Fuel Certificates (RTFCs), and ownership and operation of the UK's largest clean fuel station network. By the end of 2028, ReFuels aims to have the capacity to serve 20,000 heavy goods vehicles per day, with the long-term ambition of becoming Europe's leading integrated supplier of alternative fuels for commercial fleets.
